

Three-Phase stabilisers: ORION Y

Model "Y" with Independent phase Control

5-260 kVA

- ❖ Wheels for easy moving (up to 45kVA)
- ❖ Output advanced power digital multimeter
- ❖ SAME CONTROL CARD OF VEGA AND ANTARES

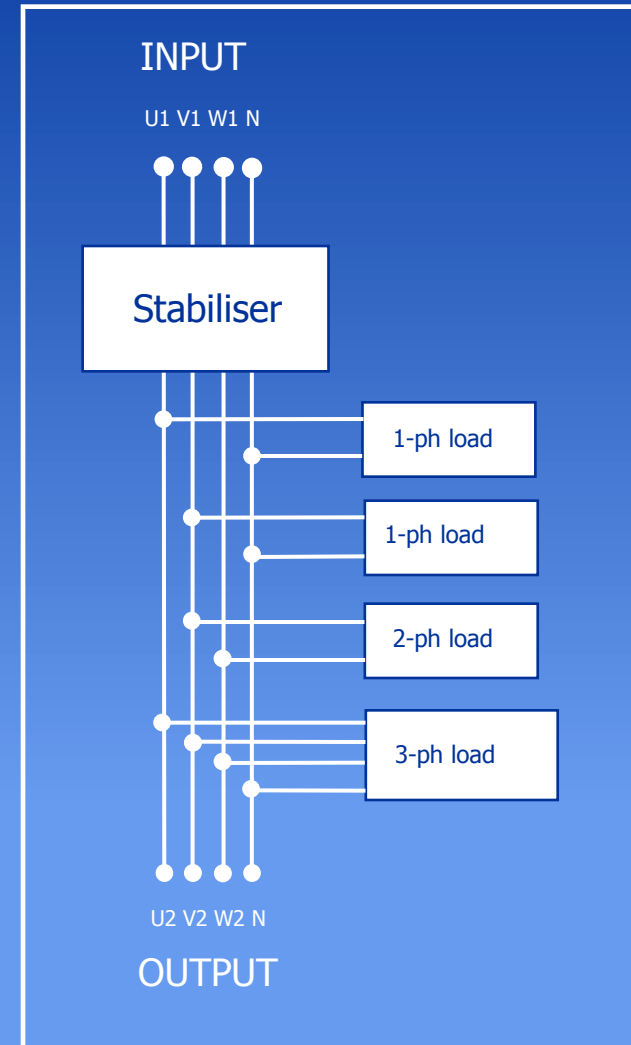

Three-phase regulation Y

INDEPENDENT PHASE REGULATION

To supply three-phase, two-phase and one-phase load with possible load unbalance between phases up to 100%

Input voltages can be unbalanced but the neutral connection is mandatory.

The stabiliser controls the RMS value of each phase independently

Standard feature on ORION Y, ORION PLUS, SIRIUS
